

Code of Conduct

General Conduct

All club members are expected to act in correspondence to the **FPU-3.006 Student Code of Conduct**¹. This document outlines behaviors that members should follow to act consistently with the university's values, along with specific actions that should be avoided, even outside of club activities. Aside from the conduct standards set within the aforementioned Code of Conduct, club members are expected to uphold the behaviors and actions below.

Illegal activity will not be tolerated. Any criminal activity, including (but not limited to) spreading malware, hacking, or exploiting vulnerabilities without consent, will be reported to the proper authorities.

Live Vulnerabilities

Live vulnerabilities must be reported to I.T.

Live vulnerabilities must not be shared with anyone until the vulnerability is patched and I.T. allows the vulnerability to be shared.

To maintain an ethical standing within personal, club, university, and technological realms, the following must be ensured before any discovered vulnerabilities are presented:

1. The vulnerability has not been used in an unethical manner as defined by the ISC2 Code of Ethics.²
 - If the vulnerability has been used unethically, the individual who discovered it will be reported to the proper authorities.
2. The vulnerability must have an in-depth report that has been sent to the party responsible for patching the vulnerability. The report must:
 - Include a time and date regarding when the vulnerability was first discovered.
 - Explain the exact process by which the vulnerability can be exploited.
 - Give a detailed risk assessment, including potential risks and their corresponding risk levels.
 - Offer a solution that can be used to patch the vulnerability.

² <https://www.isc2.org/ethics>

3. **ALL** advisors of the club and the head of student affairs are required to review and approve the vulnerability report.
4. There is a unanimous agreement that the vulnerability has been properly reported and patched.
5. The responsible party for patching the vulnerability must, in writing, confirm that the vulnerability has been patched.
6. The individual who discovered it must fully understand the steps taken to patch the vulnerability.

Unethical Hacking

The Florida Polytechnic Cybersecurity Club does not tolerate, endorse, support, or advocate for any form of unethical hacking. These guidelines have been formed based on the ISC2 Code of Ethics², discuss club activities, and are expected to be followed by club members at all times. The guidelines below outline standards that members of the club must follow.

1. All club activities will aim to support the goal of creating a stronger technological infrastructure.
2. No club activities will attack, or lead to attacks, on non-controlled environments (e.g., live exploits on unconsenting parties).
3. All club activities will be open and public and reported to maintain trust and confidence within the Florida Polytechnic University community.

Act honorably, honestly, justly, responsibly, and legally.

- a. All club activities will be legal and done in controlled environments to ensure responsible and ethical hacking.
- b. All reports of club activities will be done honestly and honorably
- c. All concerns about the club or activities from members within the club, from anybody, will be taken into account, addressed, and assessed

Provide diligent and competent service to principals.

- a. All club activities will be actively monitored by officers to ensure that they are upholding all contents within this Code of Conduct.
- b. If any officer believes that club activities are not upholding the contents within this Code of Conduct, they have an obligation to report club activities to the proper authorities.

Advance and protect the profession.

- a. The club will continue to provide resources and teachings to prospective club members to ensure that the world of cybersecurity is more accessible to all.
- b. The club will practice common techniques used within cybersecurity to assist in the goal of advancing cybersecurity.
- c. Club members will be encouraged to explore cybersecurity topics on their own and share their findings with other club members in a way that is ethical, as outlined within this Code of Conduct.
